

2025 DORA State of AI-assisted Software Development report

For over a decade, the DORA team has been identifying the capabilities and conditions that fuel the success of high-performing technology organizations. This year, we are introducing the inaugural 'State of AI-Assisted Software Development' report to dive deep into how AI is impacting technology-driven teams.

- **Moving beyond the tools:** See why successful AI adoption is a systems problem, not a tools problem
- **Introducing the DORA AI Capabilities Model:** Learn the seven foundational practices that are proven to amplify the positive impact of AI on organizational performance
- **Understanding your teams:** Explore seven distinct team profiles, from "harmonious high-achievers" to teams caught in a "legacy bottleneck," to create targeted pathways for improvement
- **Directing AI's potential:** Find out how Value Stream Management (VSM) acts as a force multiplier, ensuring local productivity gains translate into measurable product performance instead of downstream chaos

*** The 2025 DORA State of AI-assisted Software Development Report is available in the following languages: English, Japanese, Korean, Modern Chinese, Traditional Chinese, French, Spanish, Latin American Spanish, and Latin American Portuguese.**
